# OXYGEN CONNECT

---

## A brief about the initiative:

We began our COVID relief work in 2021 with a spare oxygen cylinder in the trunk of our founder's car, combing the streets of Delhi for a patient who needed it. Since then, this initiative has evolved majorly to include the circulation of oxygen cylinders and concentrators among families in Delhi, Uttar Pradesh, and Madhya Pradesh, as well as supplying concentrators to COVID care facilities and hospitals.

## Our Impact:

Today, our Delhi team was back on the streets, picking up empty cylinders from families and trading these with cylinders which they had filled. Our team assisted 12 families today.

## Way Forward:

Who needs oxygen, where they are located, and how to best deliver is constantly evolving, as is our oxygen connect scheme. For now, one main development we are looking at is getting more concentrators and cylinders to our rural partners.

# HUMAN RESOURCES IN GOVT. HOSPITALS

## A brief about the initiative:

We have partnered with government hospitals in order to provide trained full time human resources to assist their overburdened doctors and nurses. Currently, we have placed 15 frontline paid staff at GIMS in Noida and LNJPN hospital, Delhi. This initiative not only reduces the load on medical professionals at understaffed facilities, it also generates livelihoods in this difficult economic time for youth.

## Our Impact:

Our frontline workers at LNJP have been on the ground for the past 2.5 weeks, and have assisted in the registration of 2,000+ patients, as well as rendering of other backend tasks. After receiving training, our frontline workers at LNJP have begun work this week in the COVID Ward.

## Way Forward:

We are hoping to hire more frontline workers in new locations across India and are discussing with partner organizations how to best facilitate.

# MASK AND PPE DISTRIBUTION

## A brief about the initiative:

With the makeshift hospitals that have sprung up in Delhi, oftentimes there are not enough PPE kits for patients and/or their relatives. After seeing multiple cases of people catching COVID (and then further transmitted it) through hospital visits, we started an awareness and PPE kit distribution drive across emergency wards in the hospitals.

## Our Impact:

Today alone, our team distributed 2500 masks and 100 PPE to 300+ people outside the COVID ward of four major government hospitals in Delhi. Over the past two weeks, we have distributed over 25,000 masks and 400+ PPE kits in total.

## Way Forward:

We will continue the distribution in Delhi, and have already begun shipping PPE and masks for distribution to partner organizations in rural areas and other cities across India.

# ABOUT US

---

Our current initiatives include providing free 24x7 auto-ambulance services, oxygen cylinders and concentrators, tele-medicine consultations to distressed families, plasma donation counseling , building an oxygen plant, setting up and upgrading COVID care facilities, placing trained full time paid staff, distributing PPE kits and masks in emergency wards of government hospitals and distributing COVID relief packages containing ration, basic medicines, masks, sanitizers to rural parts of India in Bihar, UP, MP and Assam. Our goal is to urgently fill the gaps created due to the COVID crisis.

India Against Corona (IAC) is an initiative led by TYCIA Foundation and 360Plus, which started in the year 2020 and have now reached almost 150+ members. We have supported 160,000+ beneficiaries over the last year through direct support programs like transport to migrants, Direct Cash Transfers to families who walked/cycled back home, Ration support, Livelihood rehabilitation of street vendors, and Counselling helpline. IAC raised and deployed more than \$200,000 on these efforts.

TYCIA Foundation is a Non-Government Organisation registered in 2011 working in the domain of Education, Livelihoods, Youth Empowerment, Prison Reformation, Rehabilitation & Reintegration, Gender Justice and Disaster relief.

360Plus is a network of young professionals on US and Indian origin who wanted to leverage their skills and resources to provide "learning through travel" opportunities to youth and are working to democratize global citizenship, and our projects focus on providing travel, technology, and education opportunities to youth who would otherwise not have access to experiential learning.

We thank you for supporting us in our COVID relief efforts!
